Rigs

Whitewater FD - Tanker 1230  
4,100-gallon Tanker  
Whitewater, Wisconsin

# Facts and Figures...

- Tanker 1230 is a 2004 U.S. Tanker water hauling rig operated by the Whitewater FD in Jefferson County Wisconsin.
- The unit is built on an HME chassis with a 68,000 GVW rating and a 176" wheelbase: it is powered by a 450 hp Cummins motor outfitted with an Allison automatic transmission.
- The tanker carries 4,100 gallons of water and is outfitted with a Darley high-volume portable pump (650 gpm)
- Tanker 1230 has 10-inch side and rear dumps and a 5-inch direct fill line on the rear.
- The rig also carries two dump tanks: a 3,500-gallon square dump tank and a 2,500-gallon rectangular dump for single lane operations.
- Tanker 1230 is one of two large capacity tankers operated by the Whitewater FD – and one of several large tankers in Jefferson County.

# Whitewater Tanker 1230

Tanker 1230's short wheelbase, cab-over chassis design, and 45-degree cramp angle make it quite maneuverable on the rural roads of Jefferson County.

# Whitewater Tanker 1230

The 5-inch direct fill line is part of a standardized fill requirement for tankers operating in the mutual aid group.

# Whitewater Tanker 1230

Tanker 1230 is shown here operating at a water supply drill in April 2014. The tanker was the first water hauling unit to arrive and crews are working to deploy the rig's dump tanks.

# Whitewater Tanker 1230

The “real” performance feature of Tanker 1230 is its ability to fill at a rate in excess of 1,000 gpm by using the 5-inch direct fill line. The tanker is shown here being filled using 5-inch LDH.
