

The Fire Department's Interface with Fire Protection Systems: Sprinklers/Standpipes/Pumps/Alarms

A program for everyone from firefighter to Fire Chief. The 8-hr seminar covers the best practices and considerations when operating at emergency incidents involving fixed-fire protection systems.

Topics presented include...

- Commercial v. residential systems considerations
- Sprinkler/standpipe/fire pump basics
- Alarm and detection system basics
- Common operational failures (systems and fire departments)
- Emergency incident considerations/operations

The seminar includes classroom activities and on-site activities involving local fire protection systems.
